ACKNOWLEDGMENT

We are greatly indebted to our project guide **Ms. Mukta Shelke** for her able guidance throughout this work. It has been an altogether different experience to work with her and we would like to thank her for his help, suggestions and numerous discussions.

We gladly take this opportunity to thank **Dr. Rajurkar A. M.** (Head of Computer Science & Engineering, MGM's College of Engineering, Nanded).

We are heartily thankful to **Dr. Lathkar G. S.** (Director, MGM's College of Engineering, Nanded) for providing facility during progress of project, also for her kindly help, guidance and inspiration.

Last but not least we are also thankful to all those who help directly or indirectly to develop this project and complete it successfully.

With Deep Reverence,

Biradar Maroti
Kannawar Aditya
Patil Avadhoot

ABSTRACT

IOT BASED HEALTH MONITORING SYSTEM USING IOT

Healthcare is a serious problem in this day and age. The Internet of Things (IoT) has emerged as a transformative technology that has revolutionized the field of healthcare. One of the most promising applications of Internet of Things (IoT) in healthcare is patient health monitoring, which allows healthcare providers to remotely monitor patients' health and provide prompt medical attention when needed. This research work focuses on developing an Internet of Things (IoT)-based patient health monitoring system aimed at providing a solution for patients, particularly the elderly, who face the risk of unexpected death due to the lack of medical attention. The proposed system utilizes a heartbeat sensor and an Infrared IR temperature sensor connected to Arduino UNO and Nodemcu, respectively, to monitor the patient's vital signs. The sensors collect the data, which is then sent to an Internet of Things (IoT) web platform via a Wi-Fi connection. The Internet of Things (IoT) platform displays the real-time data of the patient's health status, including the temperature and heartbeat rate, which can be monitored by doctors and nurses. The system is designed to send alerts to healthcare providers in the event of any medical emergency, ensuring that prompt medical attention can be provided to the patient.

TABLE OF CONTENTS

Acknowledgement	**I**
Abstract	**II**
Table of Contents	**III**
List of Figures	**V**
Chapter 1. INDRODUCTION	**1**
1.1 Background	1
1.2 Problem Statement	3
1.3 Objectives	4
1.4 Scope of the Study	6
1.5 Significance of the Study	7
Chapter 2. LITERATURE REVIEW	**9**
2.1 Health Monitoring System Technologies	9
2.2 Internet of Things (IoT) in Safety Monitoring	10
2.3 Firebase and Real-Time Data Storage	11
2.4 Blynk App and Real-Time Data Storage	13
Chapter 3. SYSTEM DESIGN AND ARCHITECTURE	**15**
3.1 System Components	15
3.2 System Architecture	18
3.3 Data Flow and Processing	19
3.4 Modules	21
3.5 User Interface Design	30
3.6 Alert Mechanisms	32
Chapter 4. IMPLEMENTATION	**34**
4.1 Hardware Setup	34
4.2 Software Development	36
4.3 Testing and Validation	37
4.4 Challenges and Solution	40

Chapter 5. RESULT AND DISCUSSION	**42**
5.1 System Performance	42
5.2 User Feedback	48
5.3 Limitations of the Study	50
5.4 Future Work	51
Conclusion	**52**
References	**53**

List of Figures

Figure No.	Name of Figure	Page No.
3.1	Architecture of System	19
3.2	Data Flow and Processing	21
3.3	NodeMCU ESP8266	22
3.4	Working of Max30100 Sensor	23
3.5	Max 30100 Sensor	24
3.6	LM 35 Temperature Sensor	25
3.7	MPU6050 Sensor	27
3.8	Breadboard	28
3.9	Jumping Wires	29
3.10	User Interface	32
4.1	System Setup	35
4.2	Work Flow	37
5.1	Finalized Output	43
5.2	Send Data to Firebase	46
5.3	Show the Data in Dashboard	48
